

## KIM-Anchor

Spacer as formwork stop.

Press the corrugated anchor plate into the still fresh concrete along the approximate centre axis of the future wall. Instead of the plastic caps 50 mm (deduction 2 x 2.5 mm), end caps made of concrete (concrete cover 2 x 4.5 cm) can also be used. M 16 thread for precise alignment and great strength.

Dimensioning of the M 16 threaded rod when using concrete caps: Wall thickness -  $(2 \times 4.5 \text{ cm})$
